

**IN THE CLAIMS:**

Please amend claims 11 and 12 herein. Please note that all claims currently pending and under consideration in the above-referenced application are shown below. Please enter these claims as amended. This listing of claims will replace all prior versions and listings of claims in the application.

**Listing of Claims:**

1. (Previously Presented) A composite article comprising:  
a pre-preg material comprising a reinforcement impregnated with a thermosetting resin, the  
composite article having a specific density ranging from approximately 1.00 g/ml to  
approximately 1.15 g/ml,  
wherein the composite article is configured as at least a component of a rocket nozzle.
2. (Original) The composite article of claim 1, wherein the thermosetting resin  
comprises a carbon phenolic resin.
3. (Original) The composite article of claim 1, wherein the thermosetting resin  
comprises a phenolic resin or an epoxy resin.
4. (Original) The composite article of claim 1, wherein the reinforcement comprises  
glass fibers, boron filaments, boron nitride, silicon carbide, graphite (carbon) filaments, or high  
modulus organic filaments.
5. (Original) The composite article of claim 4, wherein the high modulus organic  
filaments comprise poly(benzothiazoles) or poly(aromatic amides).
6. (Original) The composite article of claim 1, wherein the reinforcement comprises  
organic filaments of nylon, polyethylene, or aramid.

7. (Canceled)

8. (Previously Presented) The composite article of claim 1, wherein the pre-preg material further comprises a filler material selected from the group consisting of carbon powder, powdered alumina trihydrate, and antimony oxide.

9-10. (Canceled)

11. (Currently Amended) The composite article of claim 1, wherein the composite article has an across-ply tensile strength ~~that ranges ranging~~ from about 1800 psig to about 3000 psig.

12. (Currently Amended) The composite article of claim 1, wherein the composite article has an across-ply tensile strength ~~that ranges ranging~~ from about 1800 psig to about 2200 psig.

13. (Previously Presented) A composite article comprising:  
a pre-preg material comprising a reinforcement impregnated with a carbon phenolic resin, the composite article having a specific density ranging from approximately 1.00 g/ml to approximately 1.15 g/ml,  
wherein the composite article is configured as at least a component of a rocket nozzle.

14. (Previously Presented) The composite article of claim 13, wherein the pre-preg material further comprises a filler material selected from the group consisting of carbon powder, powdered alumina trihydrate, and antimony oxide.
